

The Evolution of Digital Engineering: Future Visions for GNC Model-Based Design

Ossi Saarela

Space Segment Manager,
MathWorks

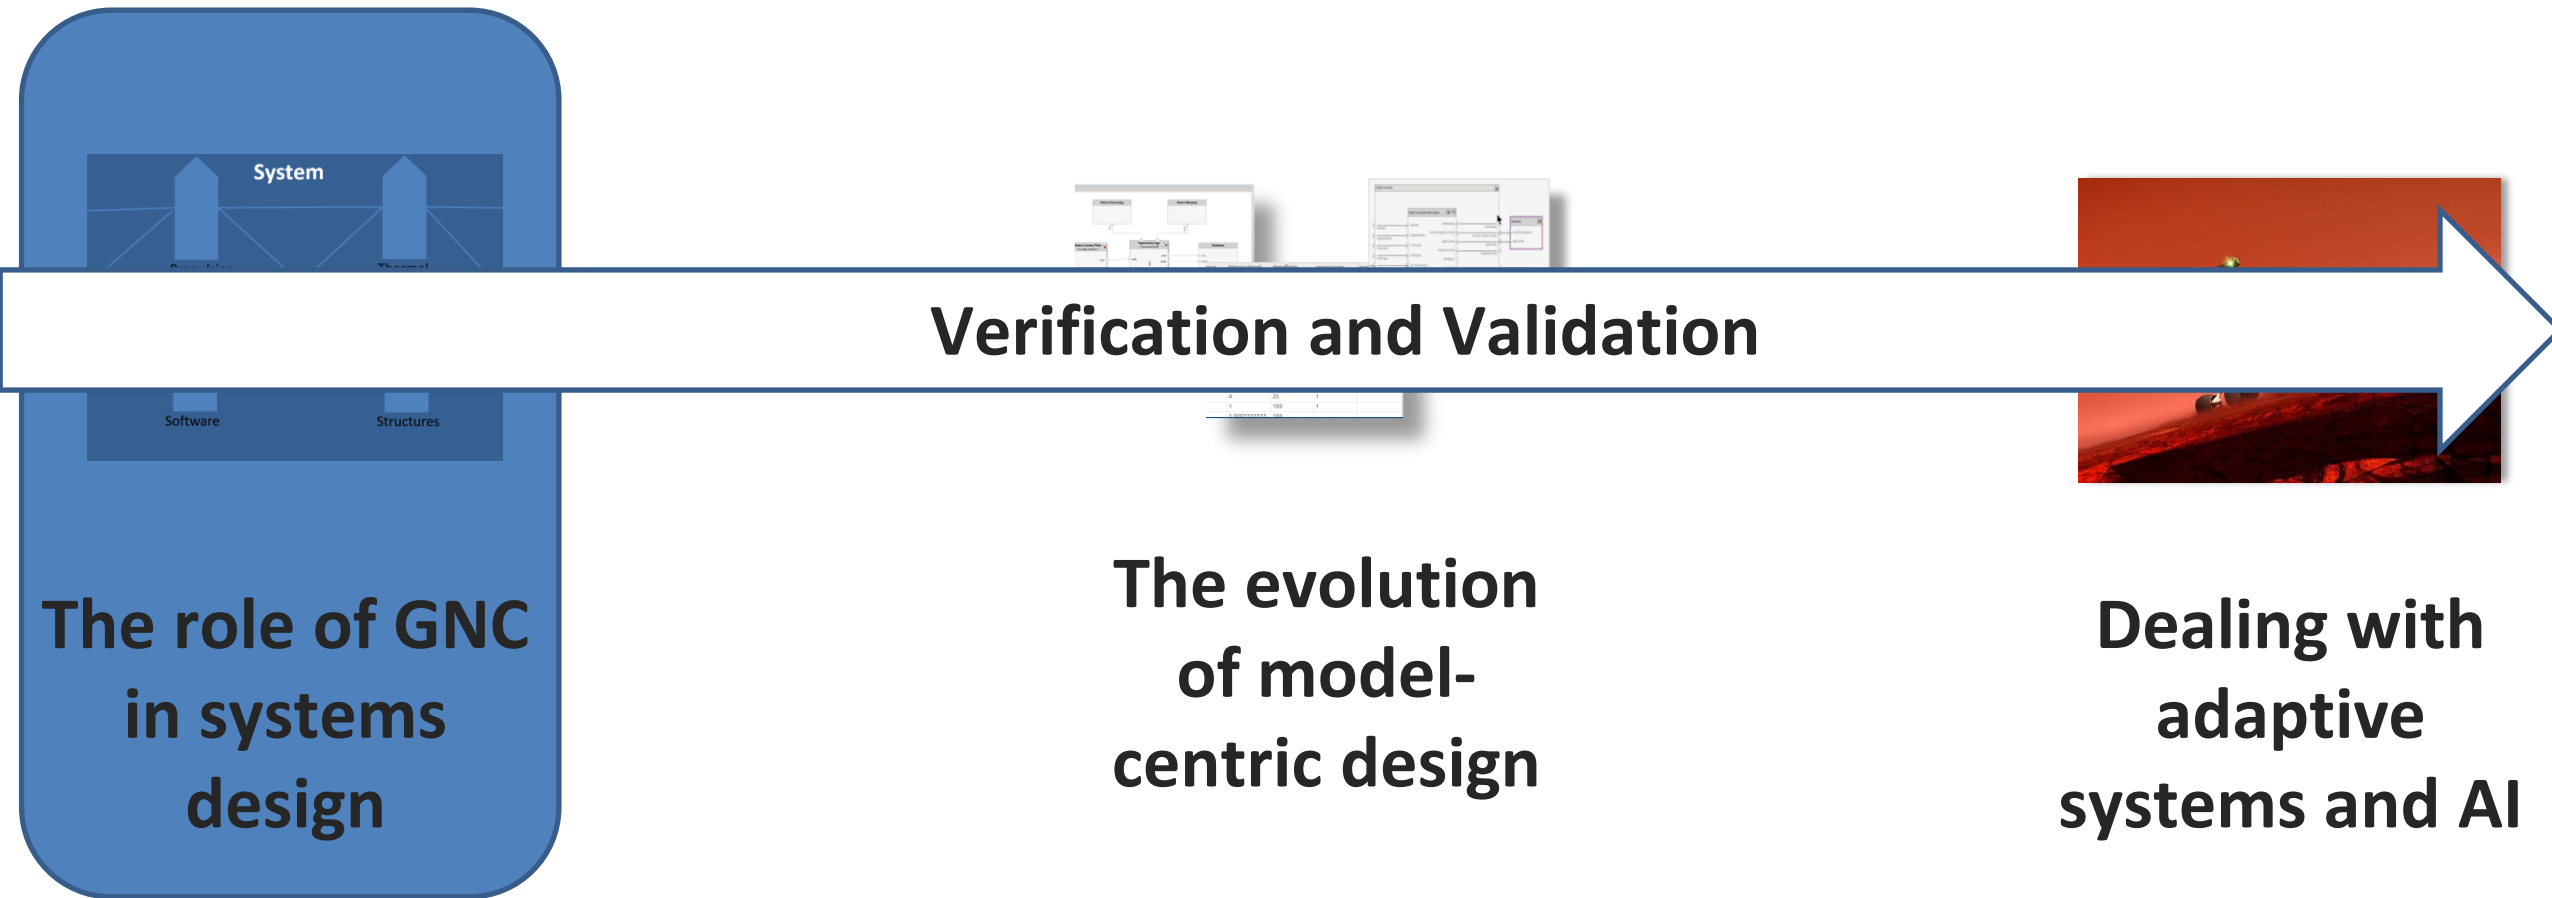

January 19, 2022

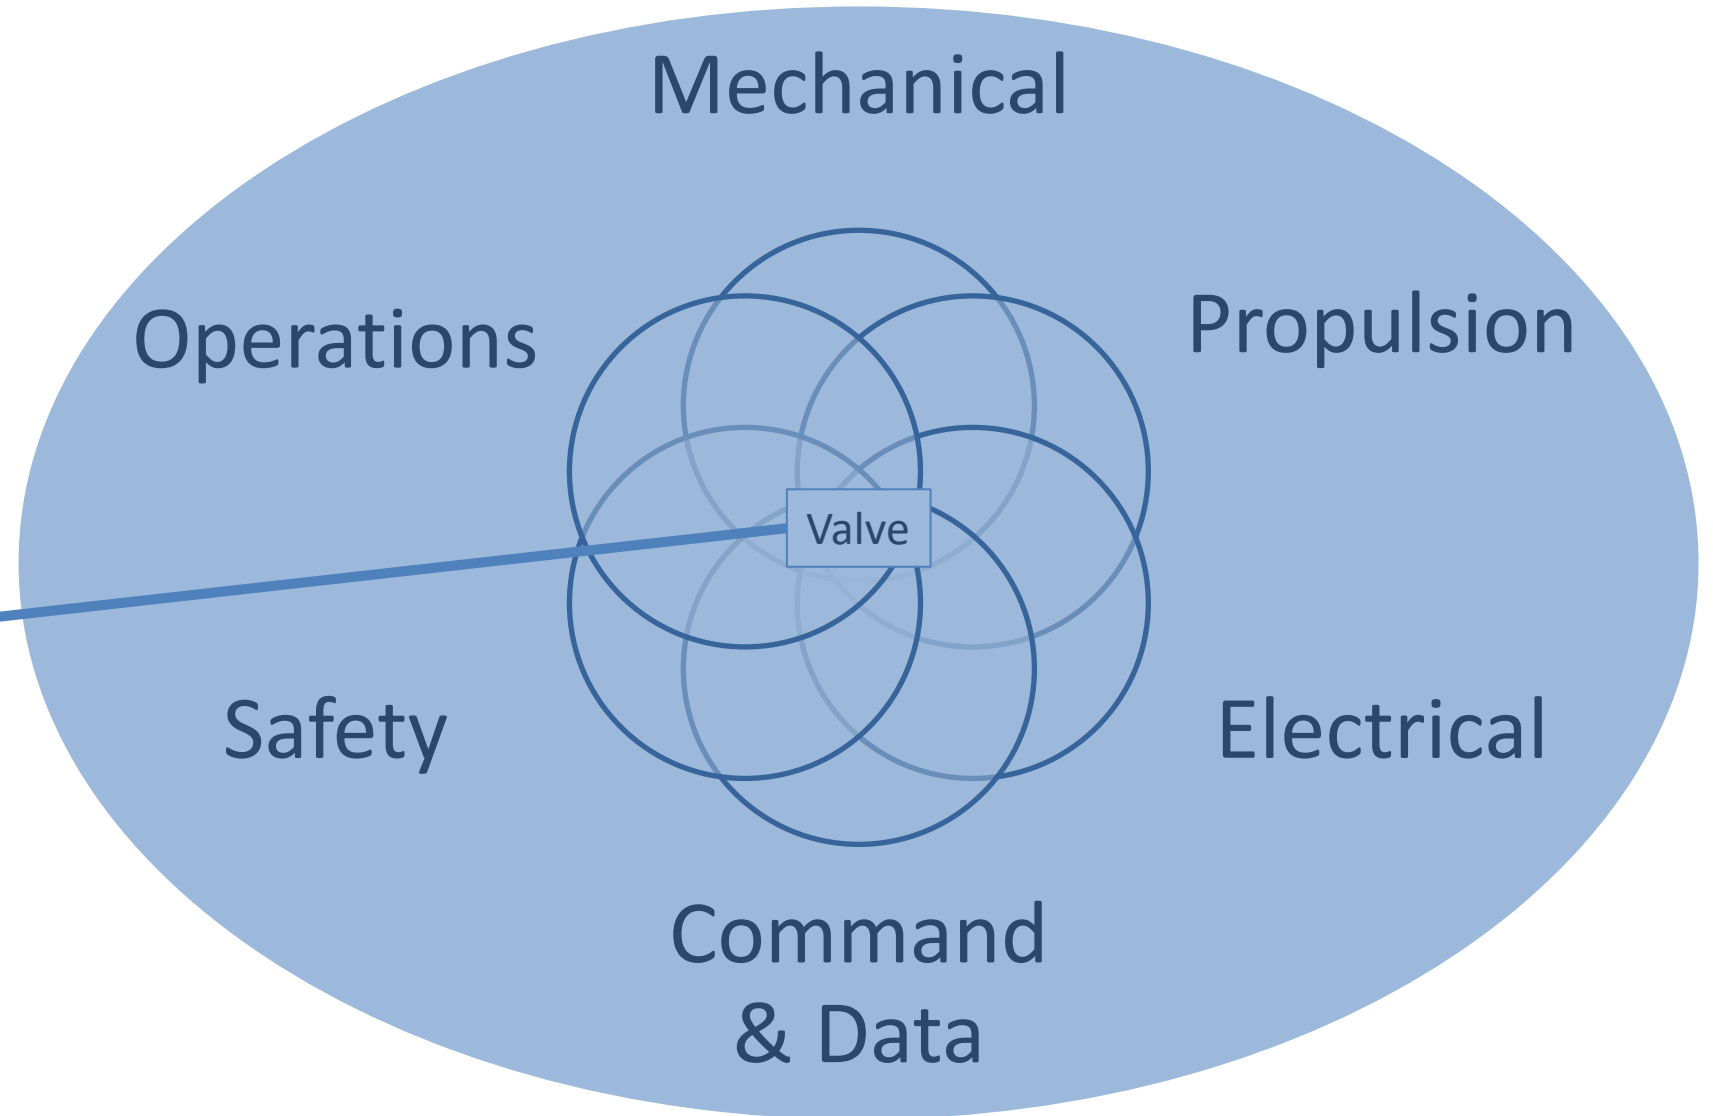

For high integrity systems, failure is not an option

This talk explores how GNC engineers can design, verify and validate high integrity systems using digital engineering

GNC is strongly coupled with many other disciplines

Change Spacecraft Attitude / Orbit

Engineering remains highly “siloed” within domains

Organizational culture impacts the ability to do systems thinking by controlling access to knowledge

**Tribal knowledge culture
hides and hoards information**

**Information sharing culture
exposes and shares information**

Processes and standards have evolved to avoid repeating past mistakes

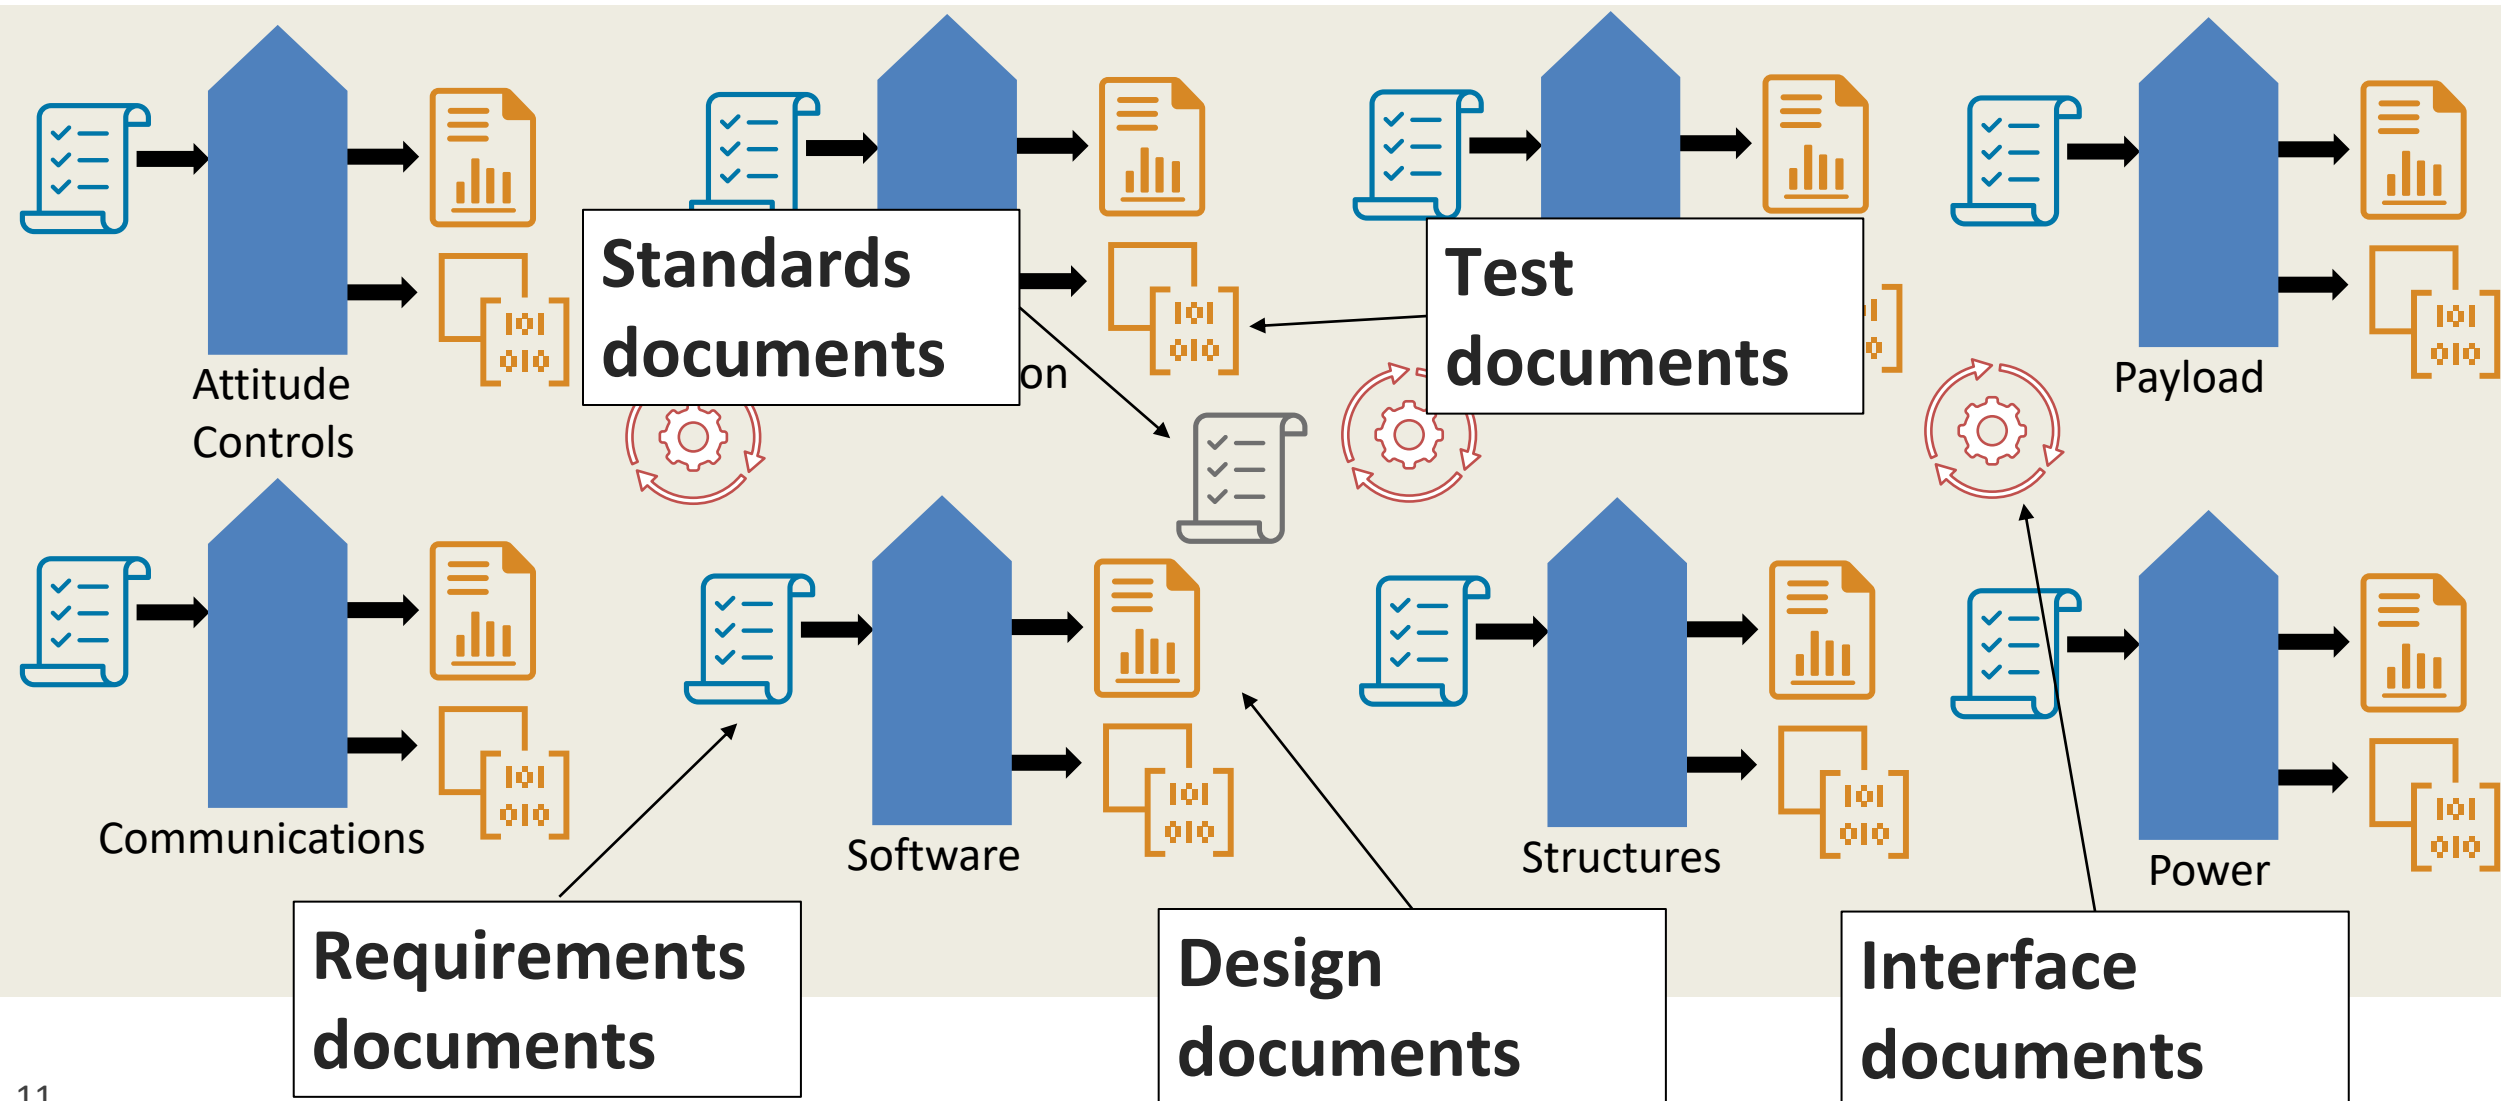

Processes and standards have evolved to avoid repeating past mistakes

**NASA Software Engineering
Requirements NPR 7150.2**

Our engineering processes have become document-intensive and challenging to manage, which can stifle systems thinking

The role of GNC in systems design

The evolution of model-centric systems design

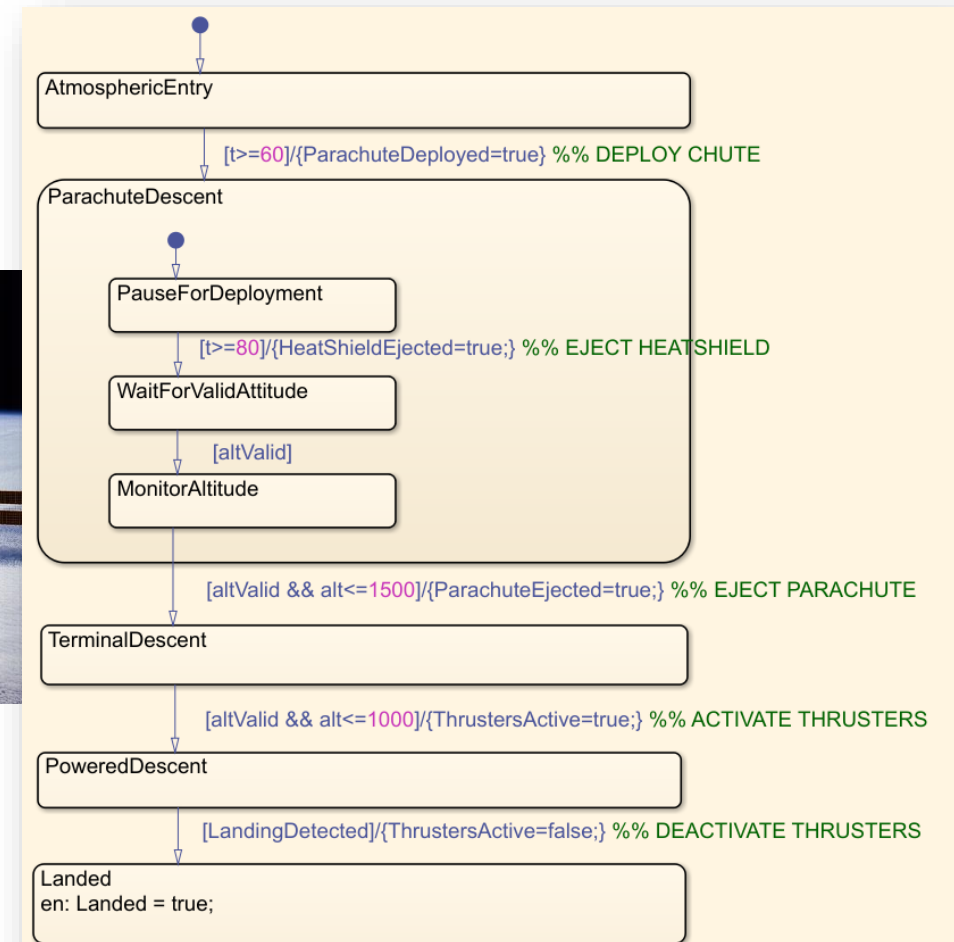

Dealing with adaptive systems and AI

Digital engineering is enabling the industry to evolve from hardware-centric, to software-centric, to model-centric

```

Model

Digital engineering is central to the space industry agenda

NASA HLS Requirements Document:

Revision: Initial Release	Document No HLS-RQMT-001
RELEASE DATE: September 27, 2019	Page: 7 of 315
Title: HLS Requirements Document (SRD)	

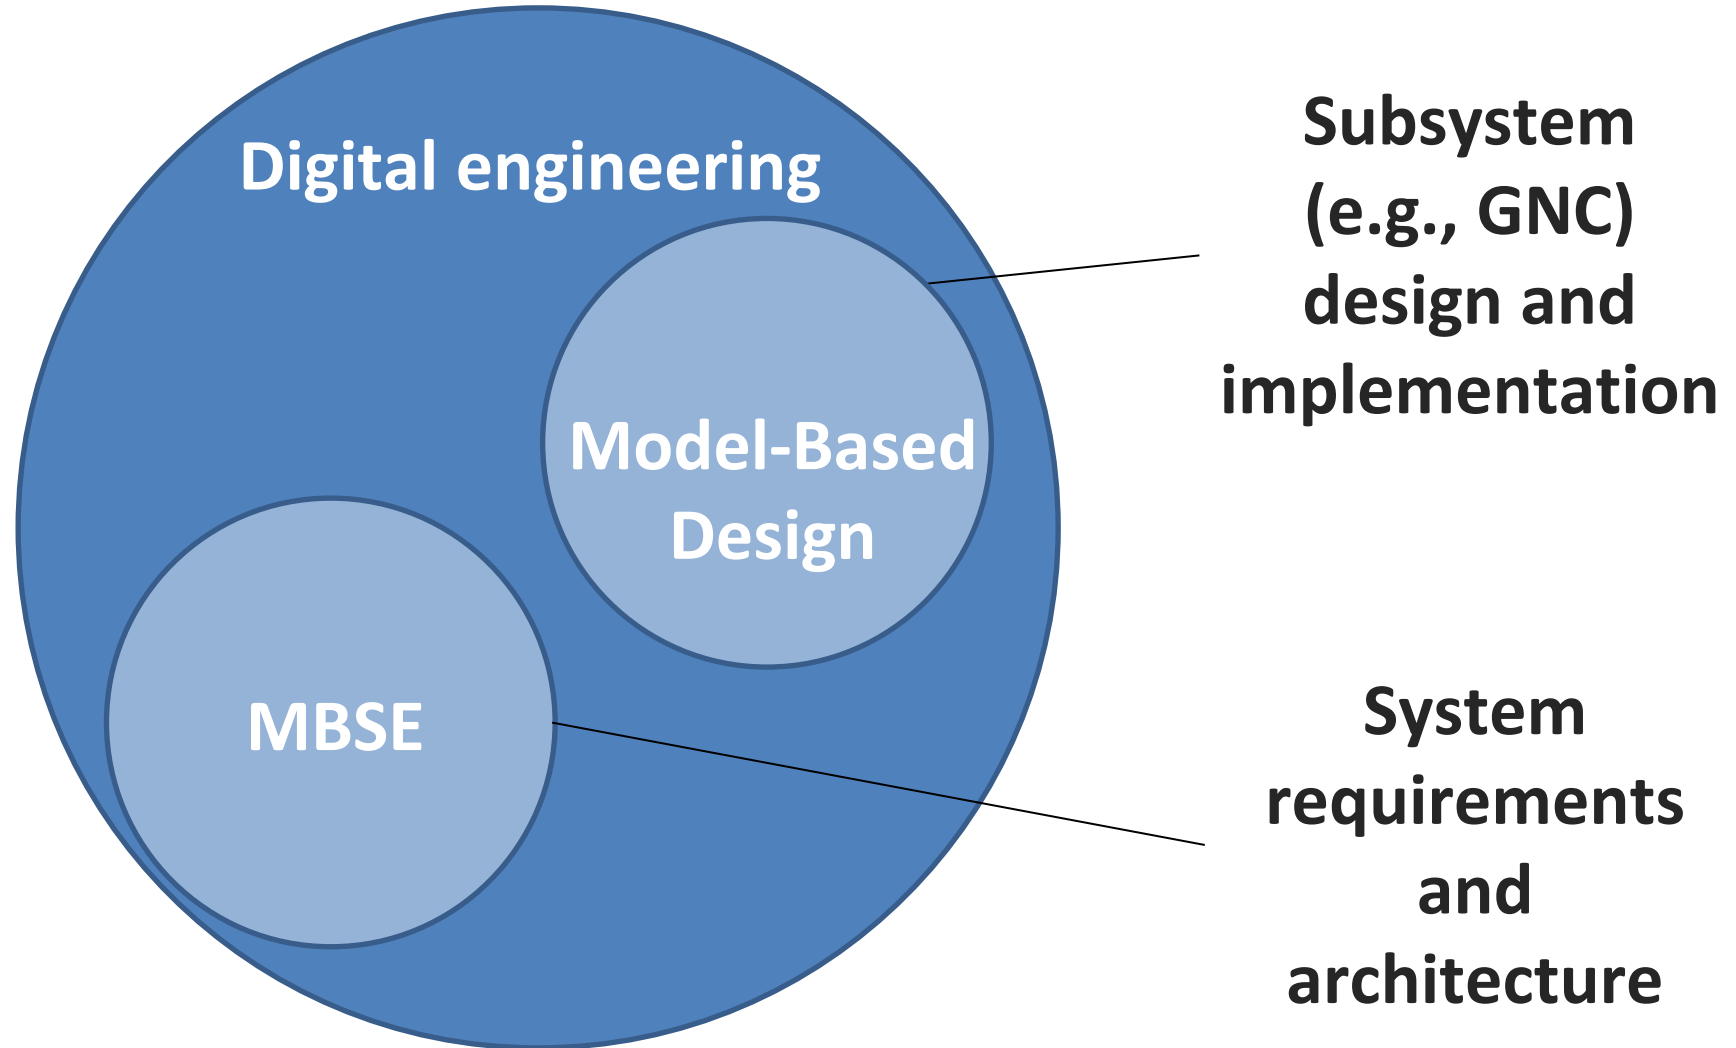

2 Documents

For the purpose of this document, the term ‘document’ can also refer to ‘digital artifacts,’ ‘models,’ or ‘viewpoints’ as needed to convey and exchange configuration managed data or information. An objective of the HLS Program is to advance towards a digital engineering environment and away from the traditional document-based approach for capturing data, reports and baselines.

ESA Agenda 2025:

“ESA will therefore digitalise its full project management, enabling the development of digital twins, both for engineering by using Model Based System Engineering, and for procurement and finance, achieving full digital continuity with industry.”

Model Based System Engineering and Model-Based Design are subsets of digital engineering

Model-Based Design is well adopted within the GNC community

Model

Many of you are using Model-Based Design for components and subsystems

Model

Many of you are using Model-Based Design for components and subsystems

Model

Many of you are using Model-Based Design for rapid prototyping

Hardware

Many of you are using Model-Based Design for code generation

```
loop_ub = bw_a_filled->size[0] - 2;
b_loop_ub = bw_a_filled->size[1] - 2;
i0 = bw_filled->size[0] * bw_filled->size[1];
bw_filled->size[0] = loop_ub + 1;
bw_filled->size[1] = b_loop_ub + 1;
emxEnsureCapacity((emxArray_common *)bw_filled, i0, (i0 - bw_filled->size[0]));
emxFree_boolean_T(&bw_b);
for (i0 = 0; i0 <= b_loop_ub; i0++) {
  for (i1 = 0; i1 <= loop_ub; i1++) {
    bw_filled->data[i1 + bw_filled->size[0] * i0] = (bw_a_filled->data[i1 + bw_a_filled->size[0] * (1 + i0)] + 1) || bw_b_filled->data[i1 + bw_b_filled->size[0] * i0] + 1 || bw_c_filled->data[i1 + bw_c_filled->size[0] * i0] || bw_b->data[i1 + bw_b->size[0] * i0];
  }
}
```

Software

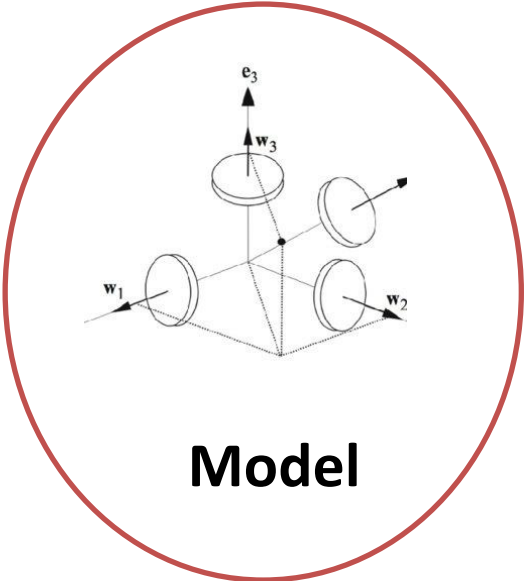

Many of you are using Model-Based Design for components and subsystems

```
loop_ub = bw_a_filled->size[0] - 2;  
b_loop_ub = bw_a_filled->size[1] - 2;  
i0 = bw_filled->size[0] * bw_filled->size[1];  
bw_filled->size[0] = loop_ub + 1;  
bw_filled->size[1] = b_loop_ub + 1;  
emxEnsureCapacity((emxArray_common *)bw_filled, i0, (i0  
emxFree_boolean_T(&bw_b);  
for (i0 = 0; i0 <= b_loop_ub; i0++) {  
  for (i1 = 0; i1 <= loop_ub; i1++) {  
    bw_filled->data[i1 + bw_filled->size[0] * i0] = (bw  
    bw_a_filled->size[0] * (1 + i0)) + 1 || bw_b_fill  
    bw_b_filled->size[0] * i0 + 1 || bw_c_filled->d  
    bw_c_filled->size[0] * i0 || bw_b->data[i1 + bw_
```

Software

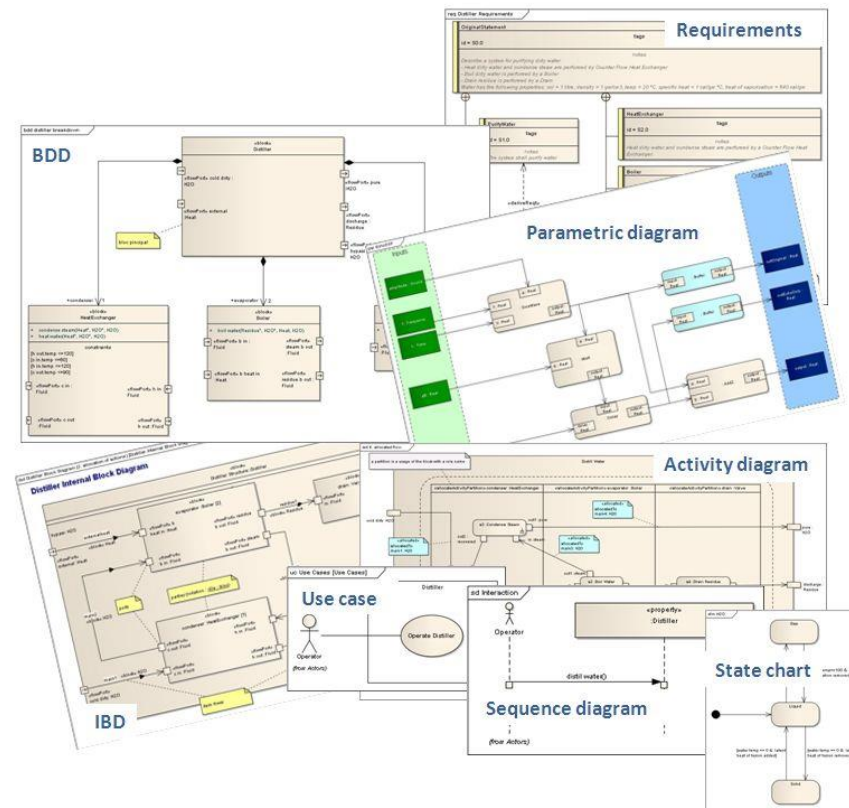

Model

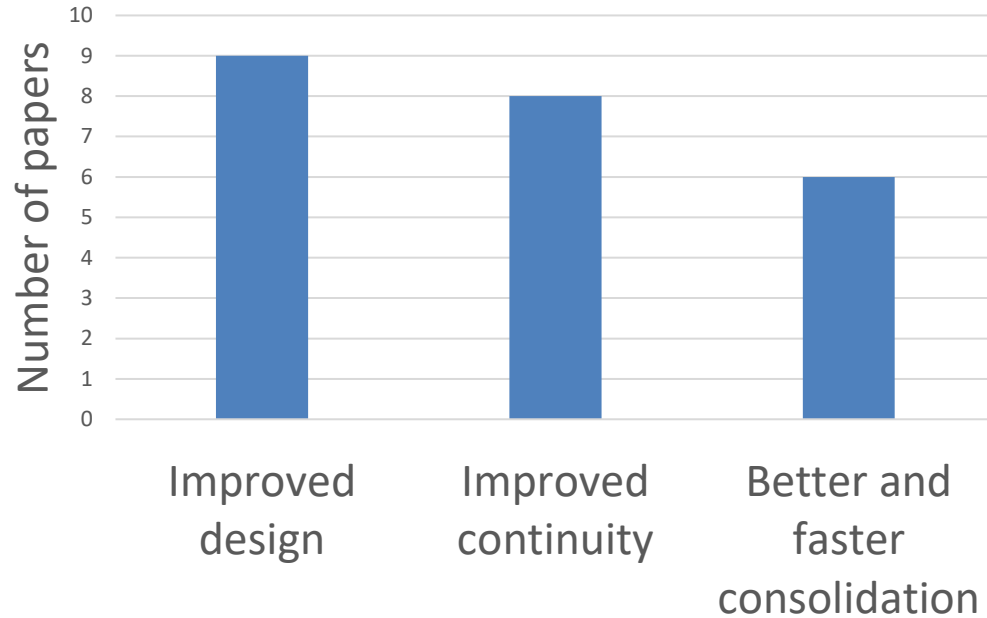

Hardware

Model-Based System Engineering is also pervasive in the space industry

MBSE can provide an improvement vs document-based systems engineering

Technical benefits

Organizational benefits

MBSE as practiced so far is not perfect

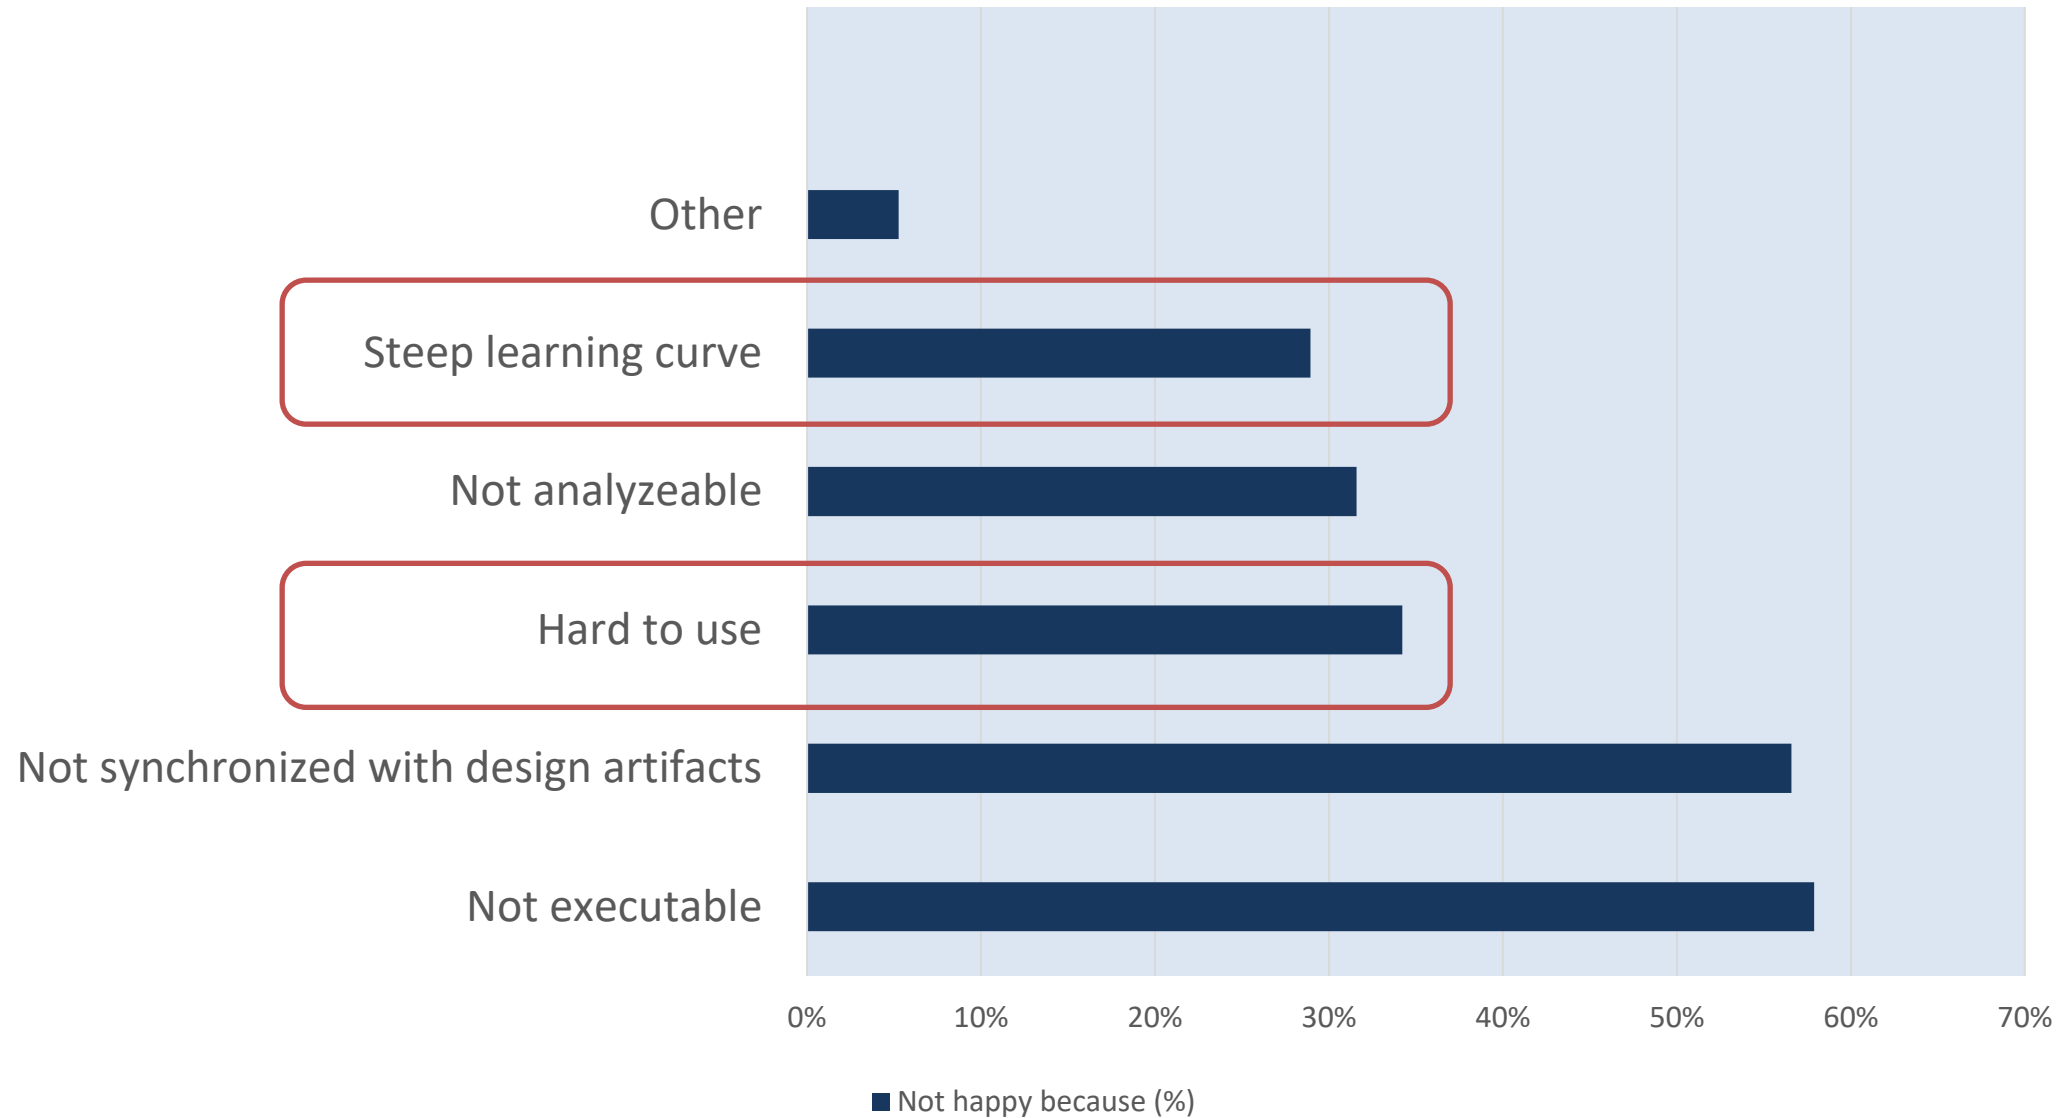

Are you happy with your current tool choices for Modeling System Architecture?

2018 MathWorks Survey

Source: 2018 MathWorks Advisory Board Survey

Many modeling tools are complex to use on a day to day basis

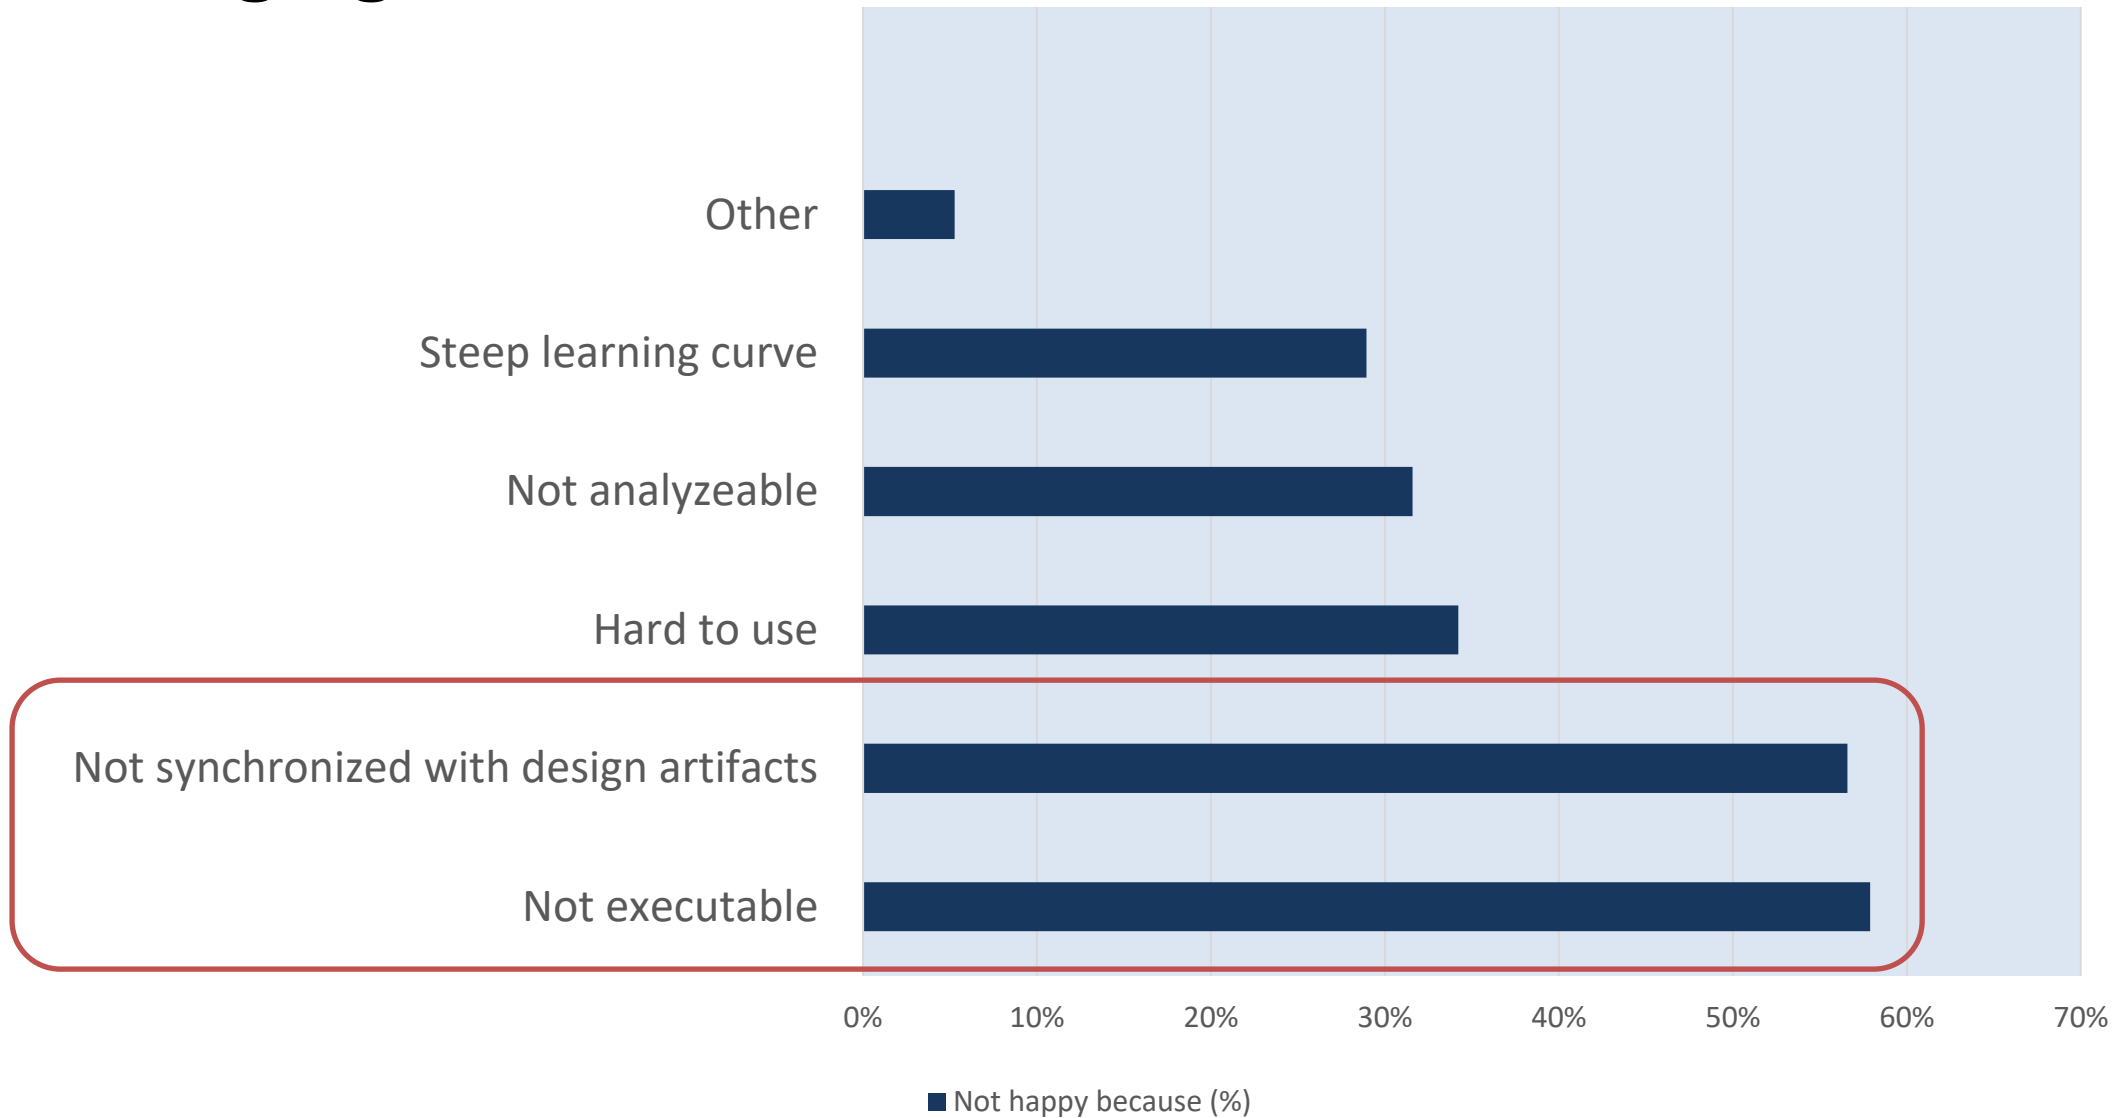

Source: 2018 MathWorks survey

Modeling languages do not always present data in a form that engineers can use for engineering analysis

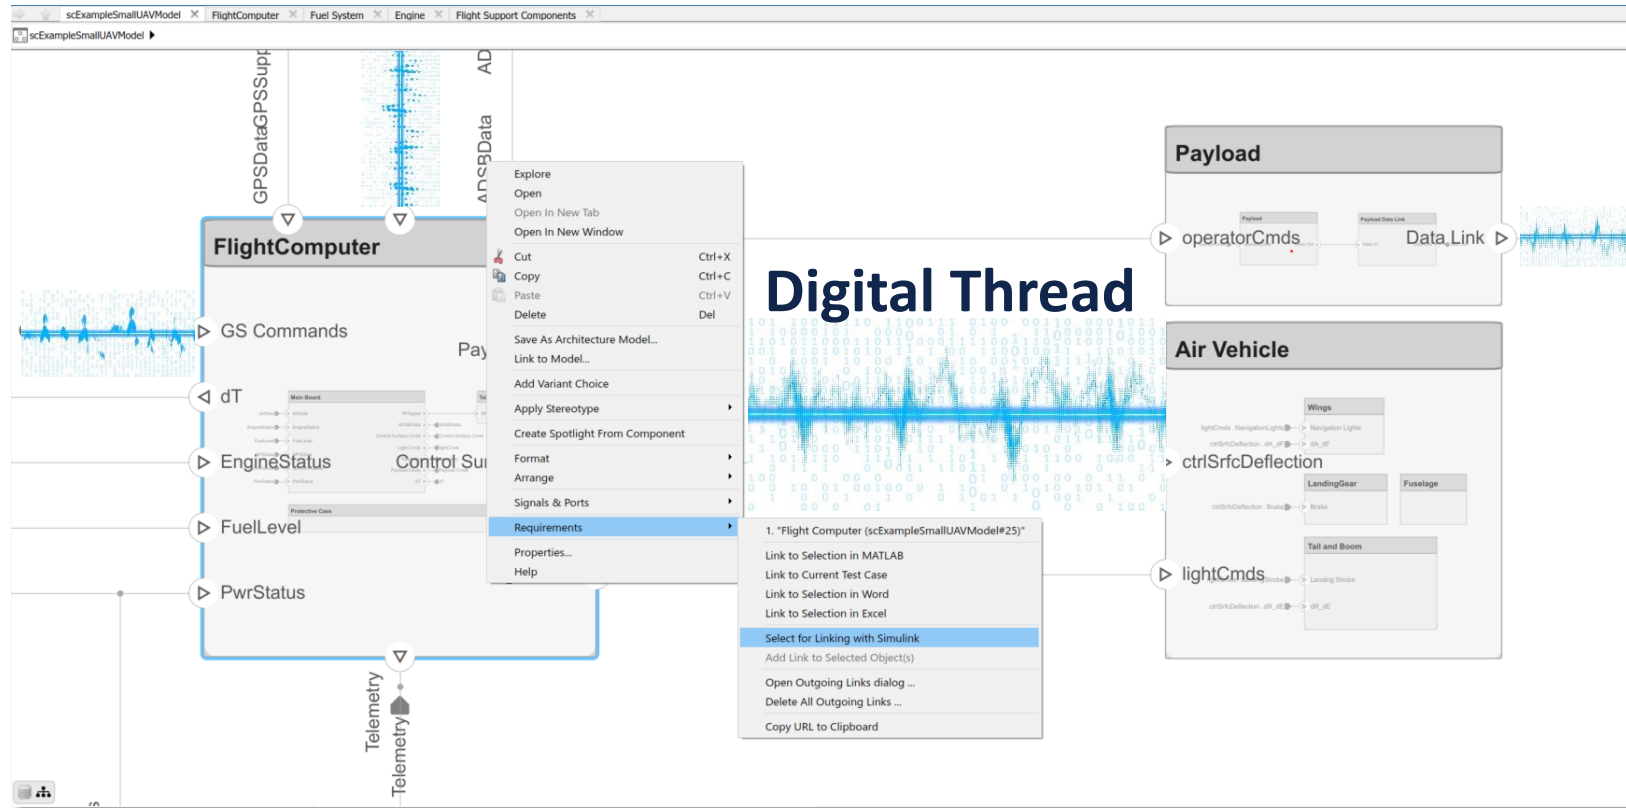

Integration between descriptive models and simulation models is challenging

MBSE can benefit your systems engineering organization, but there is more to a complete digital engineering solution

One definition of digital engineering is the connected use of models to digitally represent a system in the virtual world

This vision of digital engineering is larger than what we have done before

Digital engineering may fundamentally change the way we design, build and verify systems

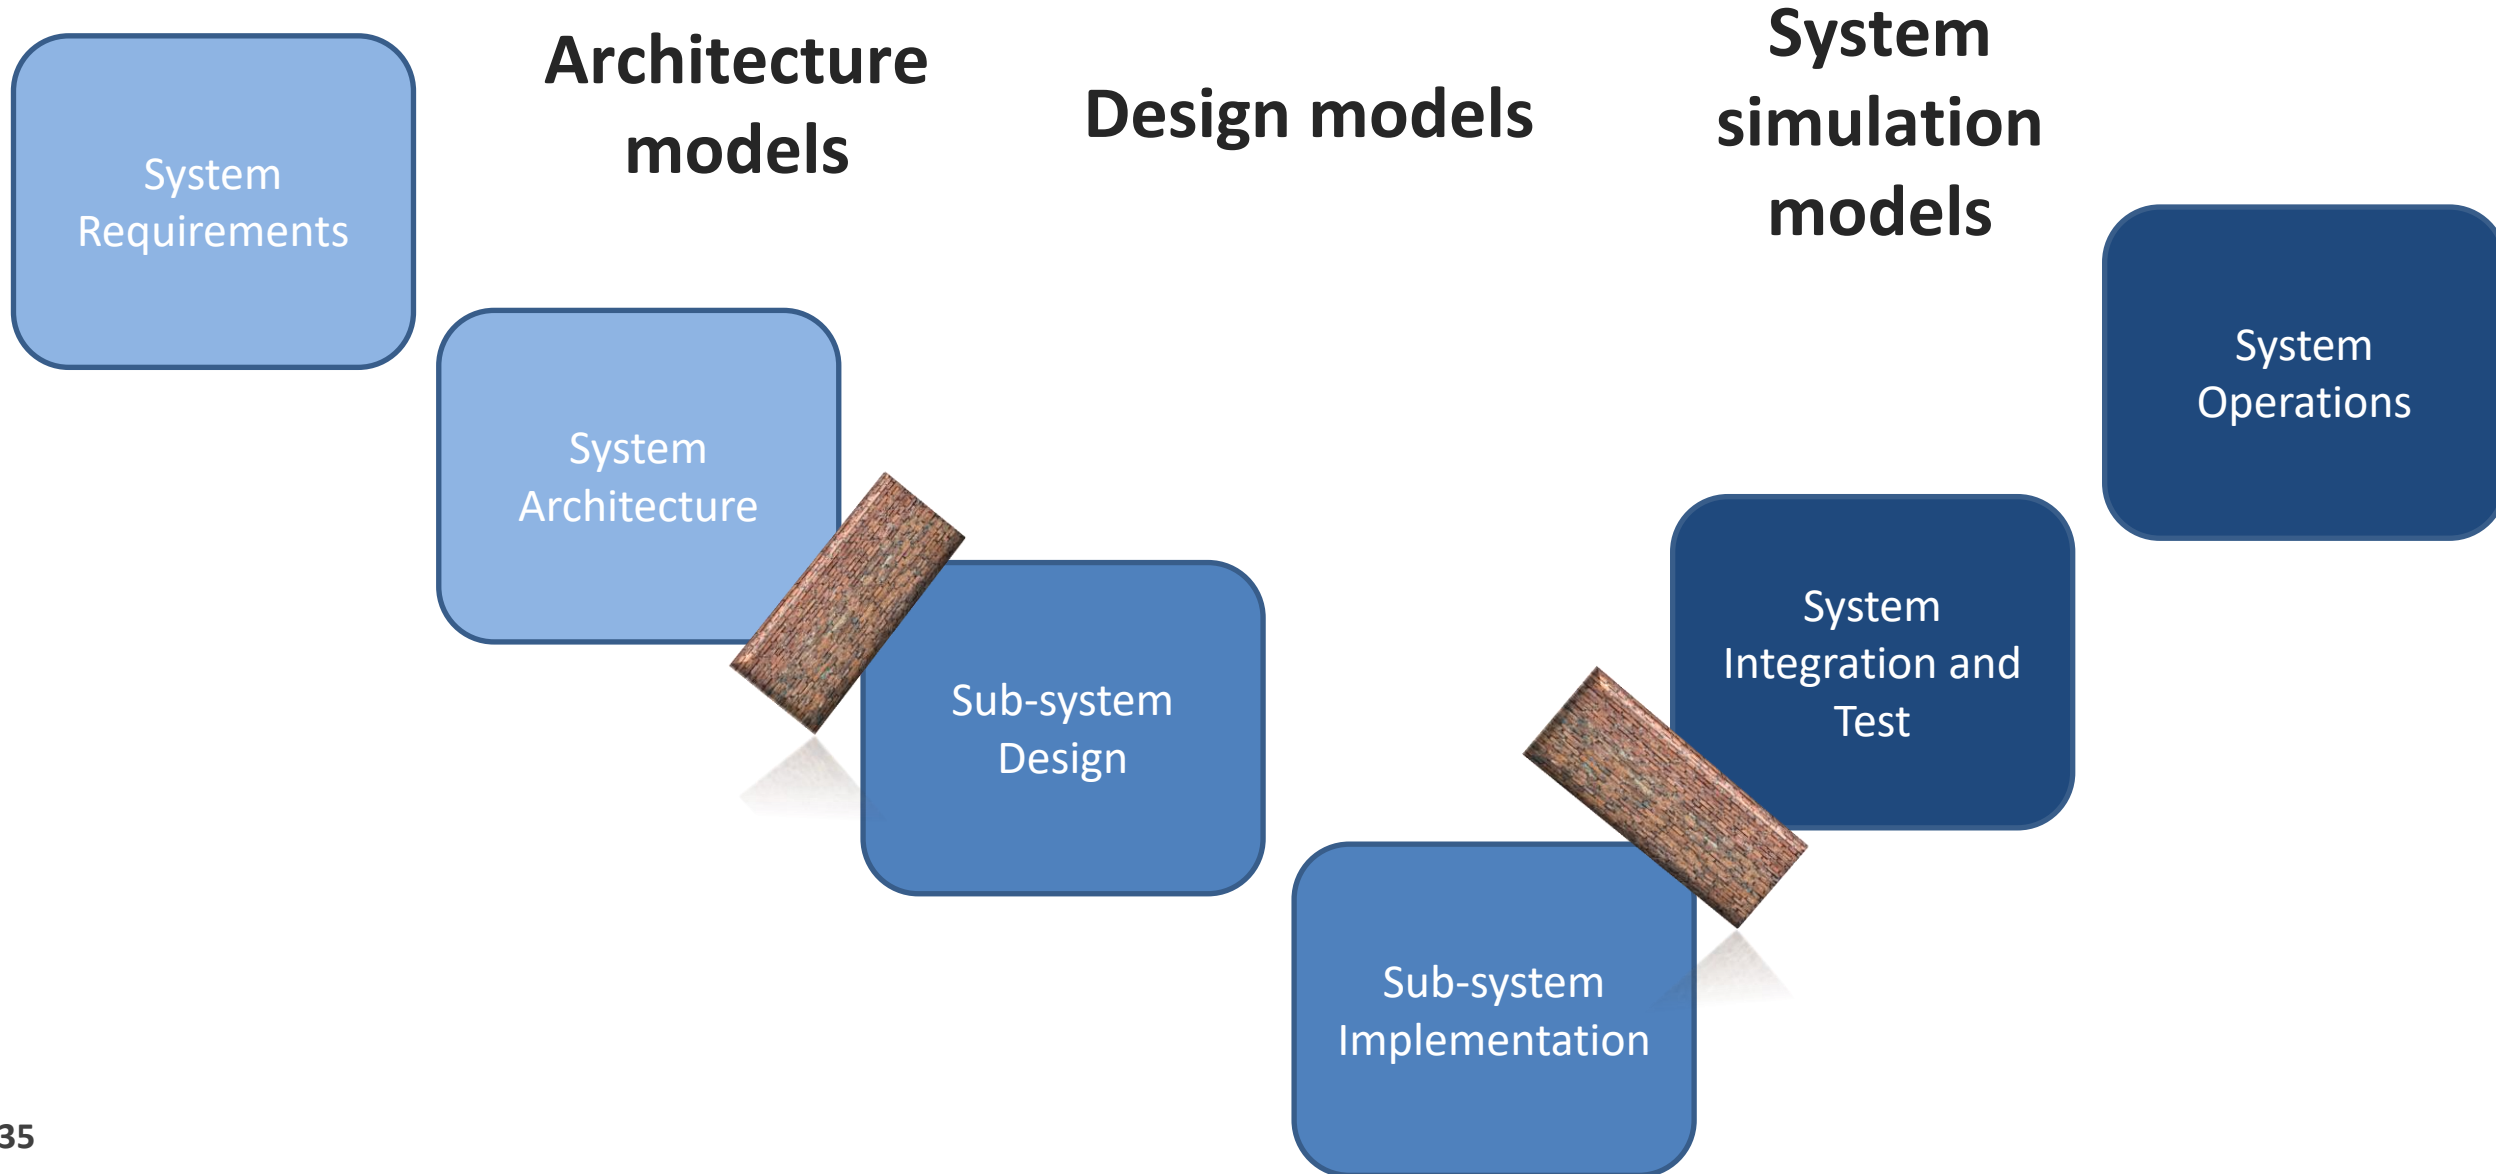

Most digital engineering efforts today have a gap between systems engineering and algorithm design & implementation

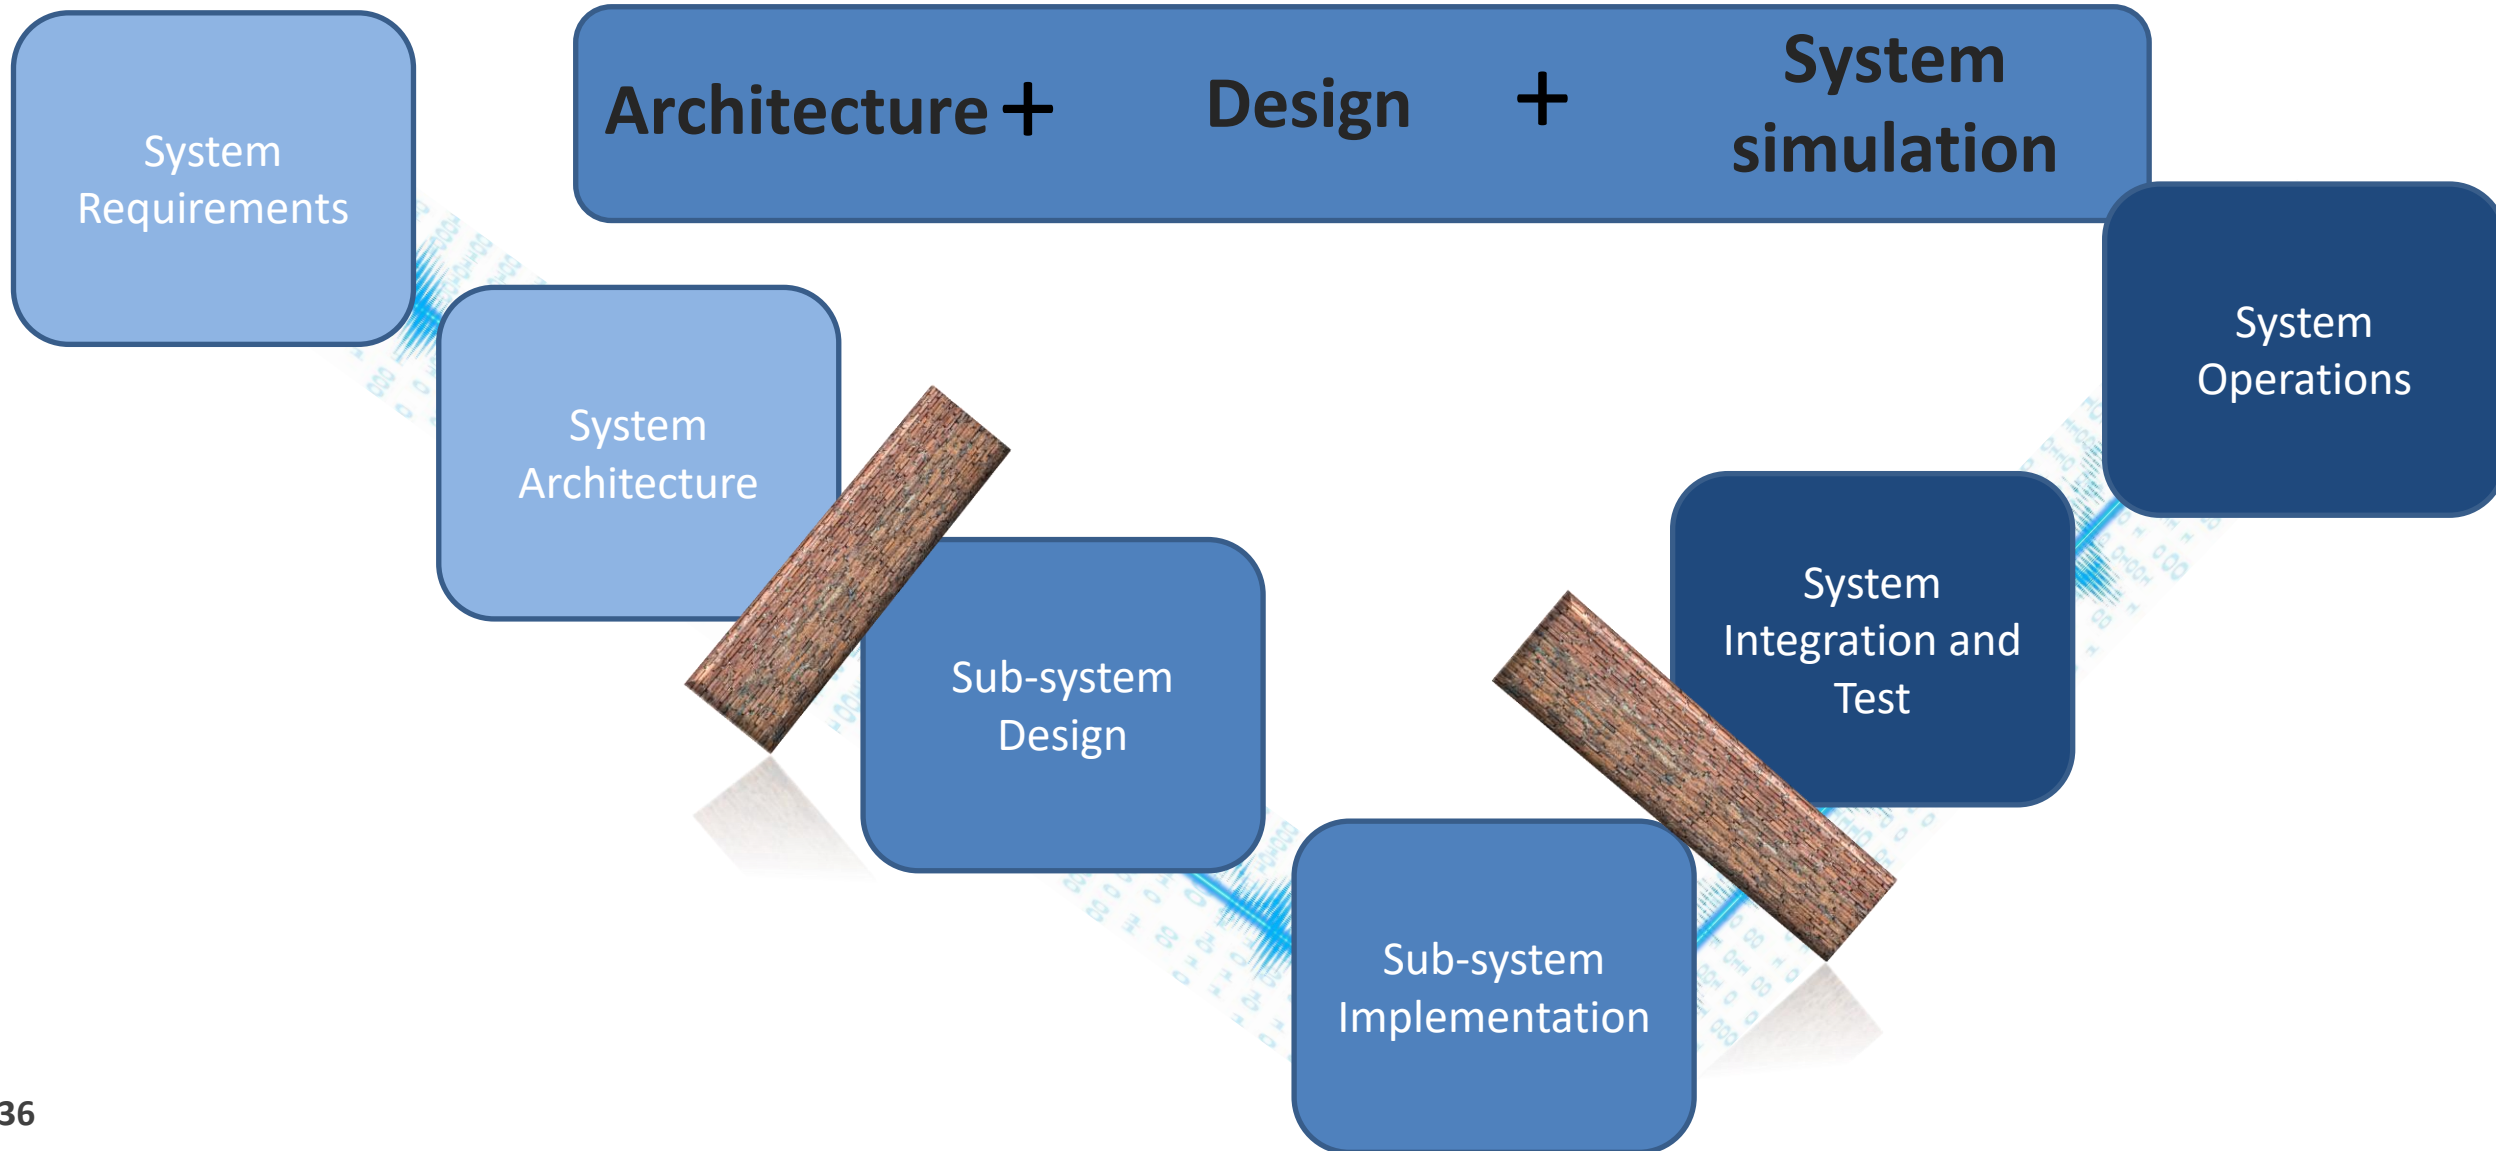

This gap impedes verification and validation, which requires traceability between requirements and design

Full model-based engineering needs a digital thread connecting *all* the models

Details

Digital engineering requires investments in people as well as technology

Figure it out yourself

Be enabled by training

Fully realized digital engineering connects system engineering, sub-system engineering and operations

```
loop_ub  
b_loop  
i0 = b  
bw_fil  
bw_fil  
emxEnr  
emxFree boolean T(4b_bw_b);  
for (i0 = 0; i0 <= b_loop_ub; i0++) {  
  for (i1 = 0; i1 <= loop_ub; i1++) {  
    bw_filled->data[i1 + bw_filled->size[0] * i0] = (bw  
    bw_a_filled->size[0] * (1 + i0)) + 1 || bw_b_fil  
    bw_b_filled->size[0] * i0 + 1 || bw_c_filled->d  
    bw_c_filled->size[0] * i0 || bw_b->data[i1 + bw_f  
  }  
}
```

The role of GNC in systems design

The evolution of model-centric systems design

Dealing with adaptive systems and AI

AI is the capability of a machine to imitate intelligent human behavior

ARTIFICIAL INTELLIGENCE

Any technique that enables machines to mimic human intelligence

MACHINE LEARNING

Statistical methods that enable machines to “learn” tasks from data without explicitly programming

DEEP LEARNING

Neural networks with many layers that learn representations and tasks “directly” from data

The ingredients for practical applications of deep learning have only become available in the last decade

COMPUTING POWER

DATA

ALGORITHMS

Machine learning has been deployed on ground segment applications for several years

Telemetry Outlier Detection

Geospatial Analytics

Recently, machine learning has also been deployed in space

Edge, cloud, desktop

AI models need to be integrated within existing designs and processes

```
loop_ub = bw_a_filled->size[0] - 2;
b_loop_ub = bw_a_filled->size[1] - 2;
i0 = bw_filled->size[0] * bw_filled->size[1];
bw_filled->size[0] = loop_ub + 1;
bw_filled->size[1] = b_loop_ub + 1;
emxEnsureCapacity((emxArray_common *)bw_filled, i0, (i
emxFree_boolean_T(&b_bw_b);
for (i0 = 0; i0 <= b_loop_ub; i0++) {
    for (i1 = 0; i1 <= loop_ub; i1++) {
        bw_filled->data[i1 + bw_filled->size[0] * i0] = (bw
        bw_a_filled->size[0] * (1 + i0)) + 1 || bw_b_fil
        bw_b_filled->size[0] * i0 + 1 || bw_c_filled->d
        bw_c_filled->size[0] * i0 || bw_b->data[i1 + bw_f
    }
}
```

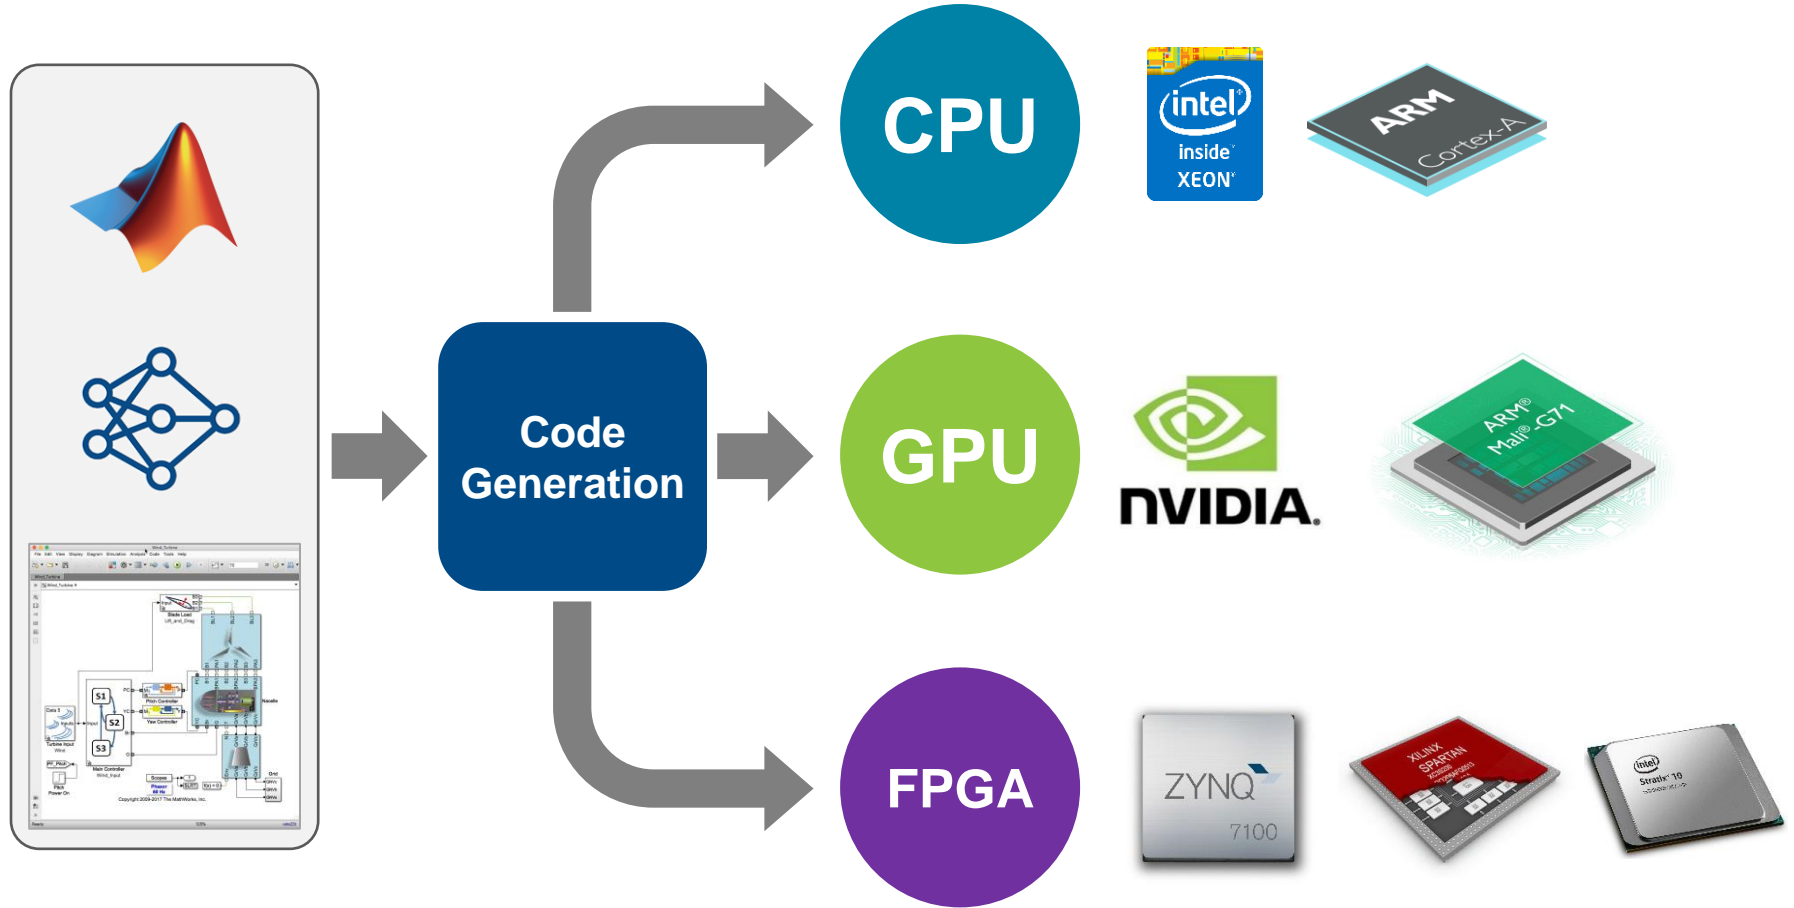

There is a growing interest in modeling at the systems level

```
loop_ub = bw_a_filled->size[0] - 2;  
b_loop_ub = bw_a_filled->size[1] - 2;  
i0 = bw_filled->size[0] * bw_filled->size[1];  
bw_filled->size[0] = loop_ub + 1;  
bw_filled->size[1] = b_loop_ub + 1;  
emxEnsureCapacity((emxArray_common *)bw_filled, i0, (i  
emxFree_boolean_T(&b_bw_b);  
for (i0 = 0; i0 <= b_loop_ub; i0++) {  
  for (i1 = 0; i1 <= loop_ub; i1++) {  
    bw_filled->data[i1 + bw_filled->size[0] * i0] = (bw  
    bw_a_filled->size[0] * (1 + i0)) + 1 || bw_b_fil  
    bw_b_filled->size[0] * i0 + 1 || bw_c_filled->d  
    bw_c_filled->size[0] * i0 || bw_b->data[i1 + bw_f  
  }  
}
```

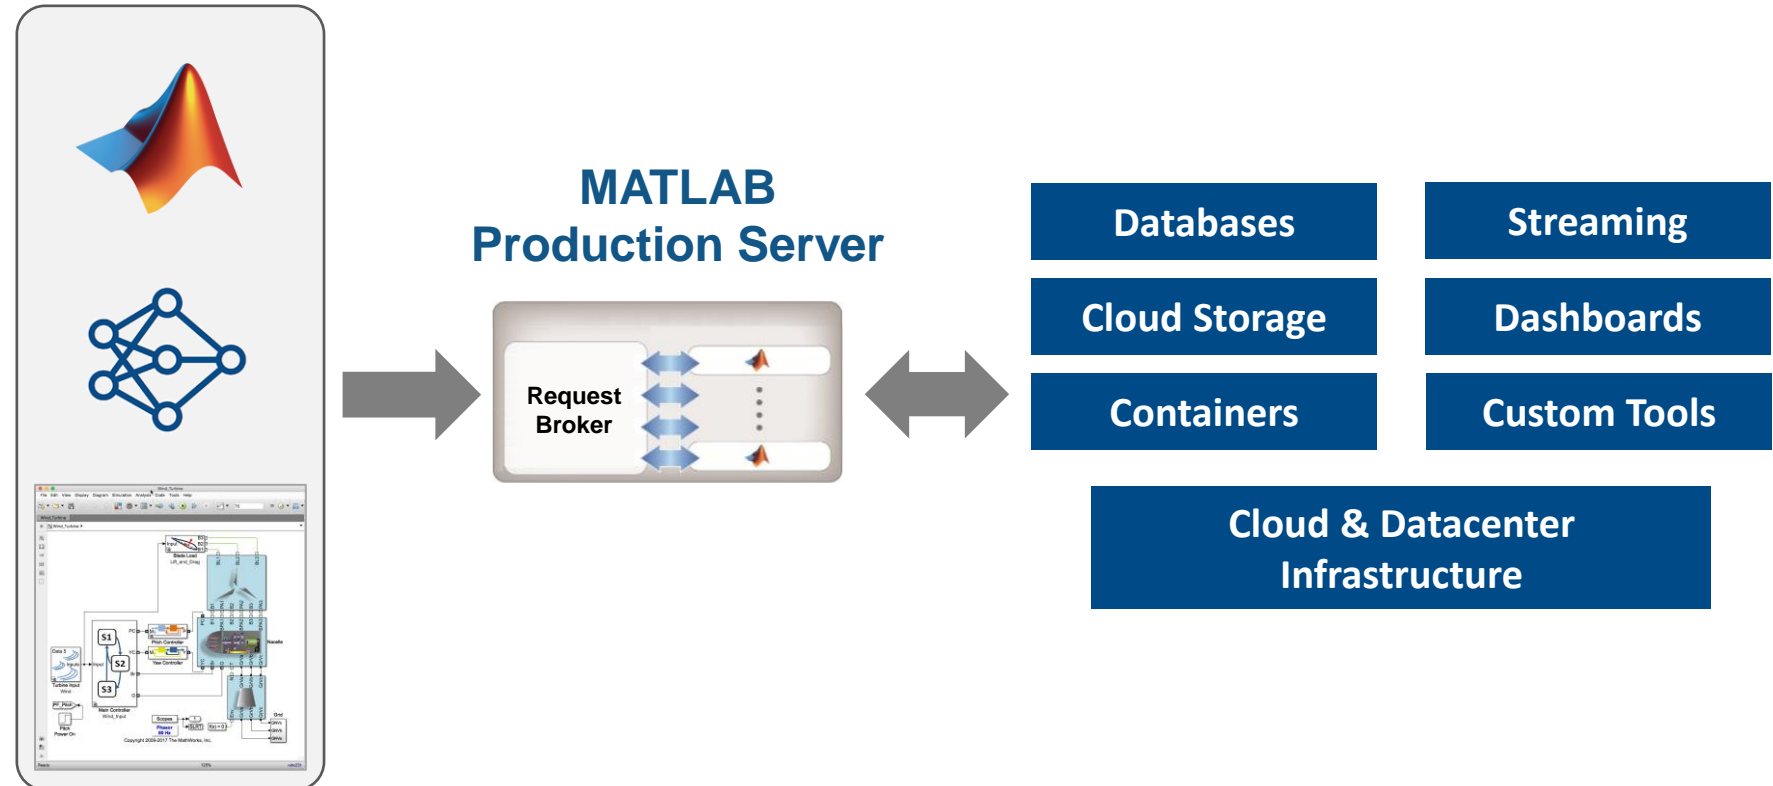

Ease of integration and deployment is key to productization of AI

Embedded deployment

Ease of integration and deployment is key to productization of AI

Ground-based deployment

is a **Leader** in the 2021 Gartner Magic Quadrant for Data Science and Machine Learning Platforms for the Second Year in a Row

The biggest challenge to deploying AI algorithms for GNC may be verification and validation

Commercial Aviation

EUROCAE WG114 – SAE G34

EASA Concept Paper:
First usable guidance for Level 1
machine learning applications

A statistical approach is one candidate for verifying machine learning algorithms

Randomized test input
(full mission envelope)

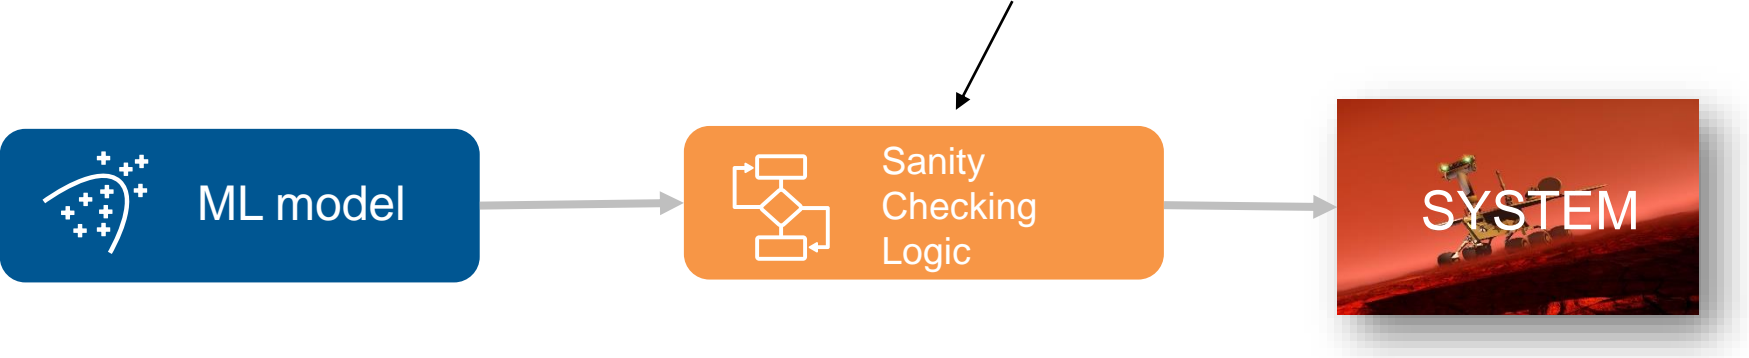

Statistical criteria

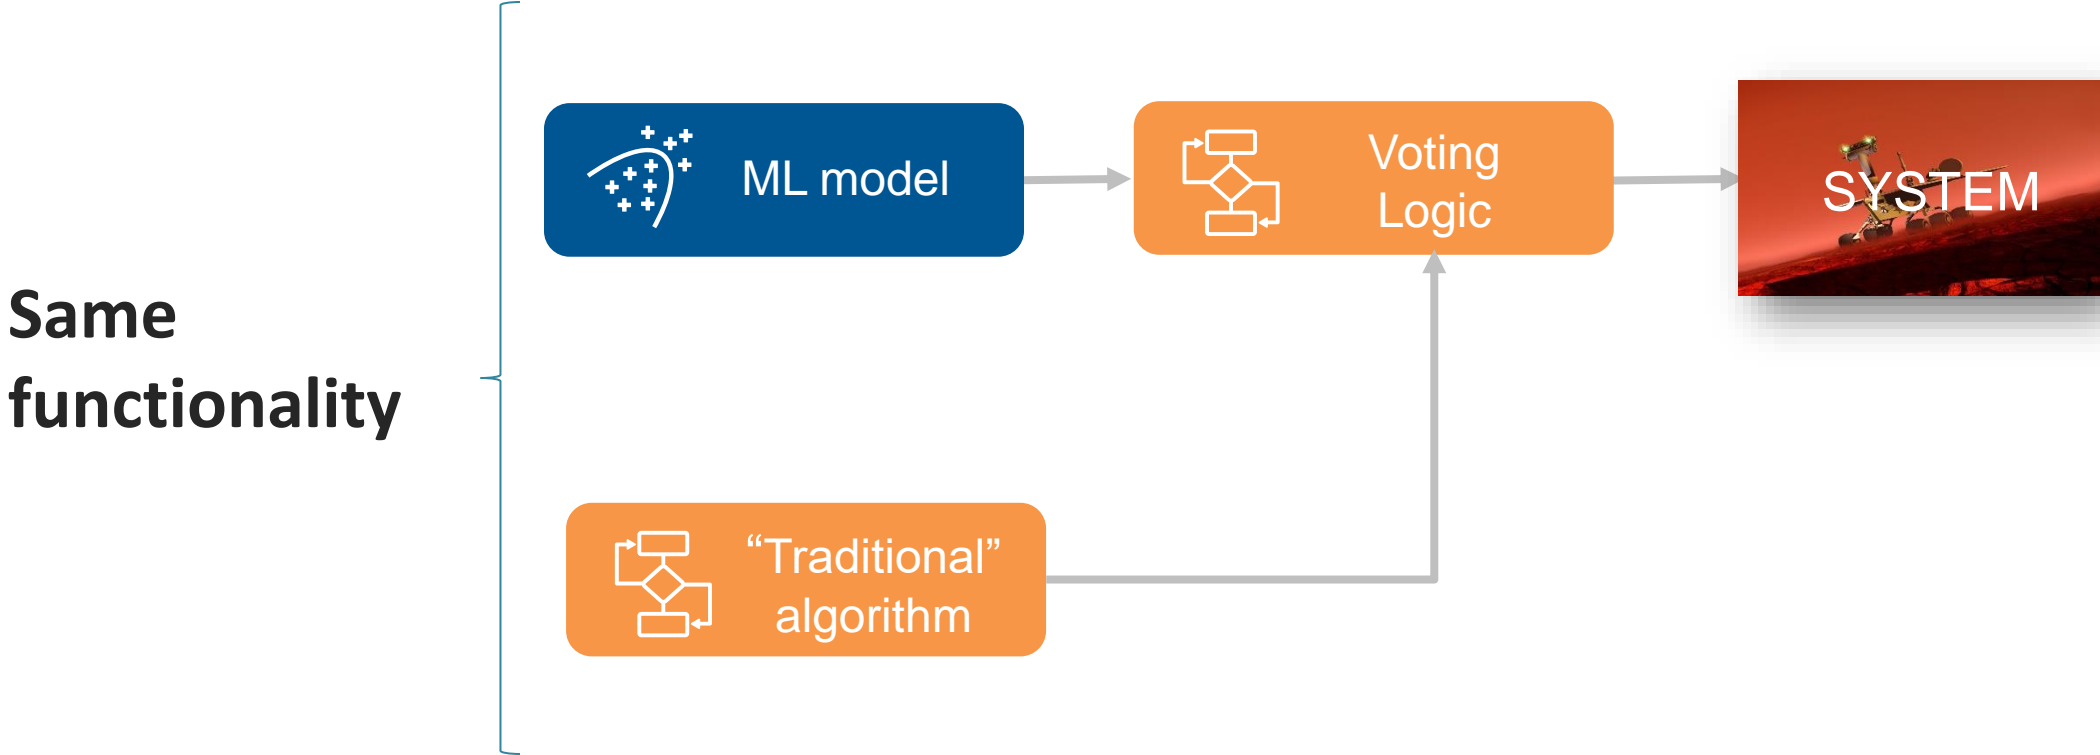

Statistical approaches can be made safer by bounding the algorithm outputs

Add sanity checking logic

Fallback mechanisms involving dissimilar redundancy are likely inclusions in a machine learning architecture

We have mentioned three methods that can be studied for the purpose of verifying machine learning algorithms

- 1. Black box testing to statistical requirements***
- 2. Sanity checking***
- 3. Dissimilar redundancy***

In summary

- **Systems thinking is more important than ever for GNC engineers**
- **Fully realized digital engineering includes and expands upon Model-Based Design**
- **GNC engineers should prepare for AI**
